24 March 2026 09:37

1. Report
2. Alert
3. Dashboard.

1. Report

[Definition] → SPL
→ Schedule
→ Cron exp.

[Trigger Action]
→ sms
→ email
→ script
→ webhook

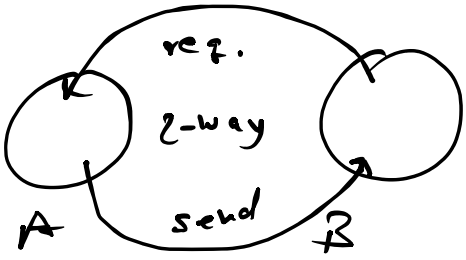
Alert

[Definition] → SPL
→ Schedule.
→ Cron exp

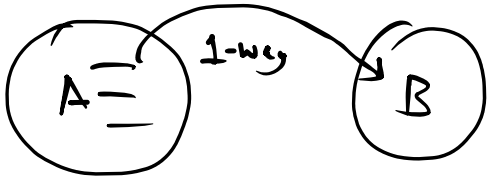
[Trigger Condn] → count > 0
→ count = 0

[Trigger Action]
→ sms
→ email
→ script
→ webhook

API



Webhook



2. Dashboard:-

→ classic → XML, Feature Based (Day1)

→ Studio → JSON, Visualization
↳ V 8.2.x +

Studio TJ

V 8.2.x +

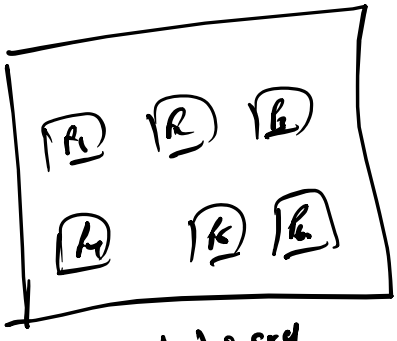
1. Create Dashboard
2. Add Panel to existing Dashboard

Static

3. Dashboard Mng.
4. Input filter creation.
5. Drill down.
6. optimization of Dashboard.

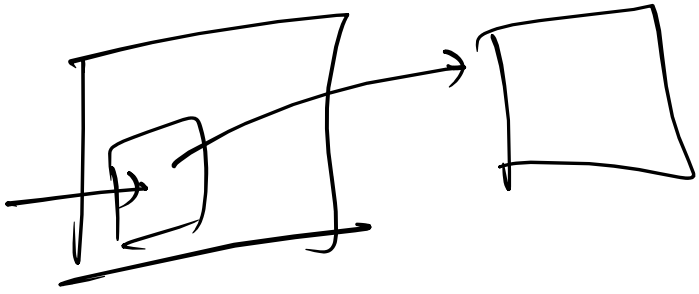
Dynamic

4. Input filter :-



Dashboard

Drilldown :-



severity

click.name = x-axis

click.value = x-axis

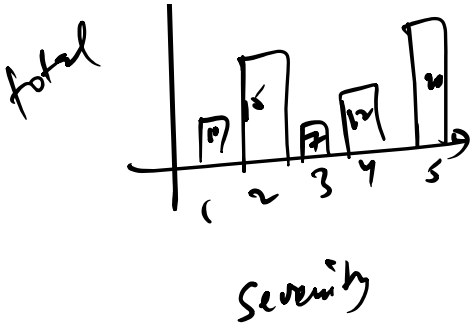
↓

Value

↳ 1, 2, 3, 4, 5

total

total-yaxis



click.value

click.name2 = total - yaxis

click.value2 = ~~total~~ 10, 16, 7, 12

<u>Dedup</u> → Duplicate values.

1. Dedup as early as ~~pos~~ possible.
2. Append / join → avoid.
3. Stats better than table
